Barclays Bank PLC**

**2017 Bank of England stress test results**

Barclays PLC and Barclays Bank PLC (“Barclays”) note the publication today of stress test outcomes for UK banks by the Bank of England (“BoE”). Under the BoE’s assessment of the effects of the modelled adverse stress scenario, Barclays’ minimum stressed Common Equity Tier 1 (“CET1”) ratio over the period 2017-21, after taking account of CRD IV distribution restrictions, was 7.4%, which exceeded the stress test hurdle rate of 6.8%.

The minimum stressed CET1 ratio occurred in 2018 of the test period, and was below the systemic reference point for that year of 7.9%. However, Barclays was not asked to submit a revised capital plan by the BoE in light of the steps already taken during 2017 to strengthen its capital position. These actions are reflected in the increase in Barclays CET1 ratio from 12.4% at 31 December 2016, used as the starting point for the stress test, to 13.1% reported at 30 September 2017. Conversion of Additional Tier 1 securities (“AT1s”) was not triggered under the stress test outcomes.

An element of the 5.0% drawdown<sup>1</sup> in the BoE’s 2017 stress test reflects litigation and conduct issues which Barclays is aiming to resolve. Barclays continues to target an end state CET1 ratio of around 13%, although it may temporarily run above that level until these legacy issues are resolved.

The stress test hurdle rate of 6.8% comprised the 4.5% CRD IV minimum CET1 ratio requirement and the 2017 Pillar 2A CET1 requirement of 2.3%. The stress test systemic reference point for 2018 was 7.9%, which also included the 1.1% phased-in G-SIB buffer applicable in 2018 based on the November 2016 FSB G-SIB list<sup>2</sup>.

The minimum stressed UK Tier 1 leverage ratio was calculated at 3.6% after taking account of CRD IV distribution restrictions, which exceeded the 3.25% minimum hurdle rate, but was slightly below the rounded 3.6% systemic reference point. Barclays reported a 5.0% UK Tier 1 leverage ratio as at 31 December 2016, which was the starting point for the stress test modelling.

The BoE stress test results for UK banks can be found on the BoE website at <http://www.bankofengland.co.uk/publications/Pages/news/2017/stresstesting.aspx> and Barclays’ results are summarised below.

<sup>1</sup> After taking account of CRD IV distribution restrictions.

<sup>2</sup> Based on the 2016 FSB list of Global Systemically Important Banks (G-SIB), published on 21 November 2016, Barclays’ G-SIB buffer was reduced from 2.0% to 1.5%. This G-SIB buffer is reflected in the systemic reference points set from 1 January 2018 onwards.

## Summary stress test results

The following Barclays' results are extracted from the BoE stress test results published today:

<b>Capital and Leverage ratios</b>	<b>As at 31.12.16</b>	<b>Minimum Stressed Ratio after all strategic management actions including CRD IV related restrictions</b>	<b>As at 30.09.17</b>
Fully loaded CET 1	12.4%	7.4% <sup>1</sup>	13.1%
PRA Transitional Tier 1 <sup>2</sup>	15.6%	9.7%	16.9%
PRA Transitional Total Capital <sup>2</sup>	19.6%	13.2%	21.2%
CET1 capital (£bn)	45	34	42
Risk weighted assets (£bn)	366	454	324
UK leverage ratio	5.0%	3.6% <sup>3</sup>	5.1%
UK leverage exposure (£bn)	1,050	1,116	1,002

<sup>1</sup> Before applying distribution restrictions, the minimum stressed CET1 ratio was 6.2%.

<sup>2</sup> The PRA transitional capital is based on the PRA Rulebook and accompanying supervisory statements.

<sup>3</sup> Before applying distribution restrictions and other strategic management actions, the minimum stressed UK Tier 1 leverage ratio was 3.0%.
