Barclays Yankee Bank Credit Forum

“Perspectives from a Yankee Issuer”

Kathryn McLeland, Group Treasurer

11/09/2018

Slide 1: Kathryn McLeland, Group Treasurer

Good morning everyone and welcome to our 4th Annual Barclays Yankee Bank Credit Forum

This is my first time at this conference, but I have been at our Equity Financials Conference here in New York over the last 6 years in my previous Investor Relations role

It really is great to return to the world of credit

As everyone in this room knows, and certainly everyone in this building, this week marks the 10 year anniversary of the Lehman bankruptcy, and of course today is 9/11

A lot has changed in the global banking landscape since the Lehman collapse and the ensuing financial crisis, as global Regulators have, rightly, dramatically enhanced their prudential rules to reduce the risk of failure and improve the framework for resolvability

In the UK, this was complemented by the development of the Ring-Fencing regime which comes into effect at the beginning of next year
Slide 2: Restructuring of the Group completed post ring-fencing in April this year

Having taken on the role of Group Treasurer earlier in January, my first major task was indeed to ensure that the final stages of our ring-fencing plans were executed smoothly and successfully.

As I’m sure you can appreciate, this was a very large undertaking for the Bank, not least for Treasury. But through meticulous planning and preparation, on the Easter weekend we successfully separated and stood up our Ring-Fenced Bank with £250bn of total assets, the first UK bank to do so.

This included fully functioning systems and capabilities, new lines and new counterparty relationships.

Within Treasury we replicated and connected 242 discrete systems and platforms to give both internal trading connectivity but also external trading capability.

We also set up correspondent banking relationships with around 50 global banks for FX management, and became members of various clearing houses and custody firms ensuring that the ring fenced bank was truly independent from the rest of the Group.

This completed the restructuring journey that Barclays had been on over recent years, with the creation of the divisional and legal entity structure that you can see on this slide.

The Barclays UK division is now operating as the newly created Barclays Bank UK PLC legal entity.

Barclays Bank UK is the third largest bank in the UK in terms of assets at £250bn, and with 24 million customers, it is a leading UK consumer and small business bank with strong financial performance, with an ROTE of nearly 19% in Q2.
It is differentiated by its scale and its leading edge digital innovation – digital customer engagement continues to hit record levels with over 10 million digitally active customers at the end June this year, up 5% year on year. And lastly, its balance sheet is robust, with a CET1 ratio of 14.1% as at Q2, which helps support a strong credit rating - in the mid to high single A range with the major rating agencies.

Barclays International is operating within the pre-existing Barclays Bank PLC legal entity. I’d encourage you to listen to Tim Throsby who will give the keynote speech at the Barclays Global Financial Services Conference tomorrow, where he will cover his plans and priorities for his business.

You will know that BBPLC is a well-diversified bank in terms of customers, geography and financial exposures.

Consumer, Cards and Payments delivers very attractive returns - with a RoTE of just under 29% in Q218. It remains an attractive growth opportunity for us particularly here in the US, with a credit card portfolio larger than our leading UK book, with net receivables in excess of US$25 billion as at the end of June. It has exciting growth opportunities, through partnerships such as American Airlines and JetBlue.

A key focus for our shareholders - the Corporate and Investment Bank returns have continued to improve, as a result of initiatives we have undertaken around talent, investment in our technological capabilities in sales and trading, and balance sheet optimisation.

The benefits of these initiatives have started to flow through over the last three quarters.

In Q2 for example, revenues in our Markets business were up 15% year on year in dollar terms – outperforming many peers, helping to deliver returns above our cost of capital.
The BBPLC balance sheet metrics are also robust, with a 13% CET1 ratio for the solo regulated entity as at June 30. The consolidated entity also enjoys credit ratings in the single A range with the major agencies, largely aligned to that of BBUKPLC.

Both of these operating companies sit below the Barclays PLC holding company, with the Group Service Company, Barclays Execution Services, providing not just operational continuity, but importantly also driving cost efficiencies across the Group to create capacity to re-invest in growth initiatives and digitisation.

At the same time as preparing for ring-fencing in the UK, there was a parallel project, which continues at pace today, which is preparing Barclays to be robustly positioned for any potential Brexit outcome.

Although I wouldn’t characterise our Brexit preparations as needing to be anywhere near the scale or operational lift as our ring-fencing execution, what I would like to do for the next few minutes is outline how Barclays is preparing and positioning itself.

I hope to leave you with the reassurance that we are approaching our Brexit planning in the same meticulous way we did our UK ring-fencing preparations.

In fact, I believe that our structural reform programme for UK ring-fencing helped us understand the time, nature and scale of the Brexit project, for example around the technology work needed.

When we look at how the market has been behaving, it does seem that Brexit concerns are overhanging both the equity and credit markets. And, I would say the most consistent area of questioning we receive from investors is how Barclays, and the wider banking sector for that matter - both UK and also international banks - are preparing for Brexit, and also of course what the potential outcomes might be from the upcoming negotiations.
On that latter point, it is not appropriate for me to speculate as to what the eventual outcomes of the negotiations might be. We need to prepare for all potential outcomes.

What I can say here today is that, whatever the outcome of Brexit, we are working to avoid disruption to any of our stakeholders and make sure that our primary focus remains on serving our customers and clients.

And, as you know, we’ve been saying for the last two years since the EU Referendum, that we are preparing for a “Hard Brexit” scenario.

When I think about Brexit and the potential impacts, including loss of single market access, I think about it in terms of two broad categories.

Firstly, our ability to continue to provide passported activity for EEA-domiciled clients in this scenario and secondly the impact on the UK economy.

In terms of the first element, our Brexit plans are well advanced, incorporating an expanded Barclays Bank Ireland, our pre-existing Irish subsidiary which is a wholly-owned sub of Barclays Bank PLC, and which we intend to use to provide passported activity to potentially impacted clients.

**Slide 3: Preparation for continuity of business in the event of Brexit**

We are planning for the expanded Barclays Bank Ireland to be operational by March of 2019, in-line with the anticipated EU withdrawal date, with new business facing EEA-domiciled clients being conducted from BBI by this date.

The client migration will be executed over time, using a combination of consensual negotiations and a Part VII court process similar to what we did for the creation of the UK ring-fence bank.

We currently expect that the majority of the existing 8 EU branches and their positions will transfer during 2019.
Although, of course, the announcement of a political agreement on a transition period until December 2020 may, if ratified as part of the broader withdrawal agreement, allow for further time for our clients and the broader industry to restructure their operation.

BBI will consist principally of the current Corporate, Investment Banking and Private Banking activity across Europe, and the Barclaycard consumer business we have in Germany (where we are the largest credit card issuer).

To give you a sense of size, taking EEA-domiciled clients and assumed migrated business, the impacted balance sheet is about 15% of Group total assets. And, in terms of revenues, it is less than 10%, so very manageable in the context of the broader Group.

Turning now to the second element - namely the impact of Brexit on the broader UK economy and the consequences for the UK banking system.

**Slide 4: Prudently managing credit risk in the UK**

Barclays benefits from meaningful geographic diversification, which means we are perhaps less exposed than other more domestically focused UK banks.

While just over half of our revenues come from UK customers and client, over 35% comes from US counterparties, given our strategy to be diversified across our two home markets of the UK and US.

And a key driver of our strategic growth plans is the US credit card business I've already mentioned.

We are not, however, naive to the risks to the UK economy, so before I outline how Barclays is positioned from a credit risk perspective in the face of Brexit, I thought it might be helpful to touch on some of the key economic indicators we track closely in the UK.
It is fair to say the UK macro-economic environment – although perhaps uninspiring, certainly compared to the strong data we’ve seen recently here in the US - does continue to be benign, despite the Brexit uncertainties.

The most recent inflation report in the UK showed the Consumer Price Index remained broadly stable at 2.5%.

UK unemployment is now at 40 year low levels of 4% and spending over the summer was robust, helped by the warm weather in the UK and, perhaps surprisingly, England’s strong performance in the soccer World Cup. This also benefited UK GDP growth - over the three months to July the growth rate picked up from 0.4 per cent to 0.6 per cent, the highest since last summer.

Earlier this year we also saw the second UK base rate hike to 75bps, which should be constructive for UK banks NII, including Barclays. Should we see a transitional agreement or “Soft Brexit” agreed over the coming months as part of the Brexit withdrawal agreement, market expectations are currently for another rate hike, although I should say that our own economist is more bearish, expecting UK base rates to say flat.

As the largest credit card issuer in the UK, we have access to a rich source of spending data, which we track in detail on a monthly basis.

Consumer spending grew 4.5% year on year in August 2018, according to the latest Barclaycard data. This is the fourth consecutive month with spending growth over 4.5%, which is the strongest consistent growth in almost 7 years.

Alongside this higher summer spending growth, consumer confidence also rebounded in August. Although the consumer confidence measure remains negative, it has been so since early 2016, pre the EU referendum. The breakdown, however, does show plans to save outweigh intentions to make major purchases.
It is fair to say Brexit-related uncertainty continues, with business sentiment dropping, driven by a general caution over the future outlook, weaker house price growth and of course the weaker pound.

In our Corporate Banking business we have seen subdued Corporate lending and increased deposit balances, as UK Corporates have deferred investment in this period of uncertainty.

Given the uncertain economic outlook, we have refined further our longstanding conservative approach to credit risk in the UK in the face of Brexit, in order to minimise any potential impact on our portfolios.

As a result, our bias is to grow the secured lending book over unsecured lending in the UK.

This is evidenced by the UK mortgage growth we have achieved over the last 12 months – an increase of £5.5 billion -- whilst unsecured balances have remained broadly flat.

This growth has been achieved within our risk appetite - our stock and flow LTVs are stable at below 50% and 65% respectively.

Buy-to-let lending also remains a modest proportion of our portfolio at 12%.

Since the 1950s, the largest year on year quarterly percentage UK house price fall was mid-teens at the peak of the financial crisis 10 years ago, and quarterly house price growth has continued to be in the 2 to 3% range since the EU referendum result. Given these statistics, the conservative risk profile of our mortgage book positions us well for any downturn in the UK property market as a result of Brexit.

In our UK unsecured books, in addition to keeping balances flat, we have tightened our lending criteria. For example, in UK cards, while we have maintained our market leading position, about two years ago we started reducing the duration, and also the proportion of long dated balance transfers.
30 and 90 day arrears rates on UK cards have continued to remain at historically low levels ever since the Brexit vote, though we are of course watching changes in unemployment data closely, which would potentially drive higher delinquencies on the portfolio.

The Bank approaches the final strait of Brexit negotiations, very comfortable with its robust capital, liquidity and funding positions. Let me touch on each of these in turn.

**Slide 5: Robust capital, liquidity and funding positions**

The Group CET1 ratio returned to our end state target of around 13% at the end of Q2. The 86 basis points of CET1 accretion from profits in the first half demonstrates the strong underlying capital generative capacity of the Group.

We also made meaningful progress in resolving legacy litigation and conduct issues, including the RMBS settlement with the DoJ for $2 billion, which puts a significant headwind to the Group capital position behind us. This should also put us in a better position for stress tests which I will touch on in more detail shortly.

Our expectation of an end-state Group CET1 ratio of around 13% provides us with a stress test capacity in excess of 460 basis points, consistent with a 160 basis points management buffer above our current expected end-state fully-loaded CRD IV MDA hurdle of 11.4%.

If I compare Barclays and the other UK banks’ relative CET1 ratios to our US and European counterparts, as can be seen in the first chart on this slide, both Barclays and the average CET1 ratios of the other UK banks are higher than our peer banks in other regions, given the Regulatory approach taken by the BOE and the PRA.

We often receive questions as to why we feel our end state CET1 ratio target of around 13% is appropriate, given some of the more domestically focused UK banks, have higher target ratios. This can be explained by considering two key
drivers - the level of MDAs at each bank and secondly, the size of management buffers. In particular, Barclays has a lower MDA at 11.4%.

Another important point to highlight - is that at H1, BBUK PLC, our ring-fenced bank printed a CET1 ratio of 14.1%, more aligned to other UK banks. Although this ratio is higher than the Group end-state CET1 ratio of around 13%, this higher ratio is able to be absorbed within the capital requirements of the Group.

The Barclays Group liquidity pool continues to be large and conservatively positioned, ending Q2 at £214 billion, with 70% in cash held at central banks. The Pillar 1 LCR was 154%, a surplus of £73 billion to the end- state 100% requirement, up from 96% at the end of 2013. This conservative liquidity position is consistent with other UK and European banks, although higher than our US peers.

As I have said before, the quality and quantum of our liquidity are inexpensive credit strengths in a low rate environment, particularly given the near term outlook for the UK.

Over recent years we have reduced our reliance on short-term wholesale funding, with the proportion maturing in less than one year now only 27%, down from 44% at the end of 2013. As a result, the Group liquidity pool is 5.4 times wholesale funding maturing in less than one year.

And lastly on funding, we are now much less reliant on wholesale funding overall, with our loan to deposit ratio at 83%, as our deposit base continues to grow, increasing by £5 billion in H1 this year.

We are clearly alert to the potential volatility in the funding markets, but are confident that we are conservatively positioned given this balance sheet liquidity and funding profile.

Finally, as you know, the Bank of England stress tests in the UK for the last two years have been seen as addressing a difficult Brexit scenario, with the key...
assumptions being a 5% fall in UK GDP, concurrent with a global recession, 9.5% UK unemployment, a fall of 33% in UK house prices and a fall in Sterling of over 30%

To summarise - the key message I want to leave you with today is that in my view, Barclays is conservatively positioned in the face of Brexit and although the UK economic environment continues its benign trend, we are planning for a hard Brexit scenario, so are well prepared for any eventuality over the coming months

And importantly our financial results show we are well on track to hit our ROTE targets for 2019 and 2020

Slide 6: Translation to HoldCo funding model continues steadily

Before I conclude, I would like to make some comments on how we are progressing with our MREL issuance plans

As many of you will know, our required level of HoldCo funding is driven by our bank specific MREL requirements issued by the Bank of England. We expect a Group end-state 2022 requirement of 29.1% of RWAs to be our binding constraint once OpCo legacy capital instruments no longer qualify

This is prior to any MREL management buffer, which we would expect to hold above this minimum requirement

At June 2018, our HoldCo external MREL ratio was 26.5% and 29.2% on a transitional basis. Hence, we already meet interim requirements as OpCo legacy capital continues to qualify until 2022

Looking back to the end of 2015 - when we had just £14.5 billion of HoldCo paper outstanding - we have issued a total of £22.6bn over the subsequent two years
This year has continued that strong issuance trend – with as we’ve raised just under £9 billion equivalent in MREL from the HoldCo YTD - in both senior and AT1 form, with call dates or maturities ranging from five to fifteen years.

In the US dollar market - we printed a $2.5 billion AT1 deal in early August, which followed the $4.5 billion three-tranche senior deal we issued in May, in both fixed and floating rate format.

While the US Dollar market remains our largest sources of term funding, we are actively diversifying our MREL funding sources, as seen in the AUD 600m deal we did earlier this year, and we are currently in the JPY market with a Samurai transaction.

We are still intending to issue around £10 billion in total from our HoldCo this year.

For the remaining issuance this year, our current preference is for senior debt, with AT1 and Tier 2 a lower priority. However, as always, our issuance plan will be subject to market conditions and investor appetite.

The Yankee market continues to be a major source of funding for us and I would like to once again thank you for the support you have shown the Barclays credit over the years.

Slide 7: Focused on profitability and returns and capital targets

So to conclude, I will re-cap some of the highlights from the latest Q2 results.

With the restructuring of the Bank now complete, and with significant legacy issues behind us, we were able to print a clean quarter, where our results demonstrated the earnings capability of the Group - as we reported a statutory ROTE of 11.8%.

The Bank’s results over the last few quarters clearly demonstrate the progress we are making towards our objective of greater than 9% and greater than 10% Group
returns in 2019 and 2020 - with management focus entirely on achieving these targets

Group income was up 10% year on year, while costs were down 3% excluding litigation and conduct, resulting in positive jaws of 13% and the Group reporting a cost: income ratio for the quarter of 59%, in line with our target of less than 60%

The Group CET1 ratio returned to our end state target of around 13%, evidencing the underlying capital generative capacity of the Group

We were particularly pleased with the CCAR stress test outcome for the US IHC at the end of June, passing on both a quantitative and qualitative basis, which was testament to the careful capital planning for this entity since its establishment in 2016

Finally, in terms of underlying credit conditions, the UK economic environment continued its benign trend. Having said that, given the uncertain economic environment, we conservatively positioned in the UK as we approach the conclusion of the Brexit negotiations

And with that I’d be happy to take any questions in the time we have remaining
Important Notice

The information, statements and opinions contained in this presentation do not constitute a public offer under any applicable legislation, an offer to sell or solicitation of any offer to buy any securities or financial instruments, or any advice or recommendation with respect to such securities or other financial instruments.

Information relating to:

- regulatory capital, leverage, liquidity and resolution is based on Barclays’ interpretation of applicable rules and regulations as currently in force and implemented in the UK, including, but not limited to, the BRRD, CRD IV and CRR texts and any applicable delegated acts, implementing acts or technical standards. All such regulatory requirements are subject to change;
- MREL is based on Barclays’ understanding of the Bank of England’s policy statement on “The minimum requirement for own funds and eligible liabilities (MREL) – buffers and Threshold Conditions” (PS30/16) published on 8 November 2016 and the non-binding indicative MREL requirements communicated to Barclays by the Bank of England. Binding future MREL requirements remain subject to change including at the conclusion of the transitional period, as determined by the Bank of England, taking into account a number of factors as described in the policy statement and as a result of the finalisation of international and European MREL/TLAC requirements;
- structural reform plans, including illustrations of Barclays business divisions in preparation for regulatory ring-fencing, are subject to internal and regulatory approvals and may change.
- future regulatory capital, liquidity, funding and/or MREL, including forward-looking illustrations, are provided for illustrative purposes only and are not forecasts of Barclays’ results of operations or capital position or otherwise. Illustrations regarding the capital flight path, end-state capital evolution and expectations and MREL build are based on certain assumptions applicable at the date of publication only which cannot be assured and are subject to change, including amongst others, holding constant the Pillar 2A requirement at the 2017 level despite it being subject to at least annual review and assumed CRD IV buffers, which are also subject to change.

Forward-looking Statements

This document contains certain forward-looking statements within the meaning of Section 21E of the US Securities Exchange Act of 1934, as amended, and Section 27A of the US Securities Act of 1933, as amended, with respect to the Barclays Group. Barclays cautions readers that no forward-looking statement is a guarantee of future performance and that actual results or other financial condition or performance measures could differ materially from those contained in the forward-looking statements. These forward-looking statements can be identified by the fact that they do not relate only to historical or current facts. Forward-looking statements sometimes use words such as ‘may’, ‘will’, ‘seek’, ‘continue’, ‘aim’, ‘anticipate’, ‘target’, ‘projected’, ‘expect’, ‘estimate’, ‘intend’, ‘plan’, ‘goal’, ‘believe’, ‘achieve’ or other words of similar meaning. Examples of forward-looking statements include, among others, statements or guidance regarding or relating to the Barclays Group’s future financial position, income growth, assets, impairment charges, provisions, business strategy, capital, leverage and other regulatory ratios, payment of dividends (including dividend payout ratios and expected payment strategies), projected levels of growth in the banking and financial markets, projected costs or savings, any commitments and targets, estimates of capital expenditures, plans and objectives for future operations, projected employee numbers, IFRS 9 impacts and other statements that are not historical fact. By their nature, forward-looking statements involve risk and uncertainty because they relate to future events and circumstances. These may be affected by changes in legislation, the development of standards and interpretations under International Financial Reporting Standards including the implementation of IFRS 9, evolving practices with regard to the interpretation and application of accounting and regulatory standards, the outcome of current and future legal proceedings and regulatory investigations, future levels of conduct provisions, the policies and actions of governmental and regulatory authorities, geopolitical risks and the impact of competition. In addition, factors including (but not limited to) the following may have an effect: capital, leverage and other regulatory rules applicable to past, current and future periods; UK, US, Eurozone and global macroeconomic and business conditions; the effects of any volatility in credit markets; market related risks such as changes in interest rates and foreign exchange rates; effects of changes in valuation of credit market exposures; changes in valuation of issued securities; volatility in capital markets; changes in credit ratings of any entities within the Barclays Group or any securities issued by such entities; the potential for one or more countries exiting the Eurozone; the implications of the exercise by the United Kingdom of Article 50 of the Treaty of Lisbon and the disruption that may result in the UK and globally from the withdrawal of the United Kingdom from the European Union; and the success of future acquisitions, disposals and other strategic transactions. A number of these influences and factors are beyond the Barclays Group’s control. As a result, the Barclays Group’s actual future results, dividend payments, and capital and leverage ratios may differ materially from the plans, goals, expectations and guidance set forth in the Barclays Group’s forward-looking statements. Additional risks and factors which may impact the Barclays Group’s future financial condition and performance are identified in our filings with the SEC (including, without limitation, our Annual Report on Form 20-F for the fiscal year ended 31 December 2017), which are available on the SEC’s website at www.sec.gov.

Subject to our obligations under the applicable laws and regulations of the United Kingdom and the United States in relation to disclosure and ongoing information, we undertake no obligation to update publicly or revise any forward-looking statements, whether as a result of new information, future events or otherwise.
