Barclays G-SII Disclosure December 2022

Background

In 2011, the Financial Stability Board (FSB) published a list of banks and other financial institutions that were considered Global Systemically Important Banks (G-SIBs). G-SIBs are defined as banks or other financial institutions that could be expected to have the greatest impact on the global financial system and the global economy, should they fail. The Basel Committee on Banking Supervision (BCBS) concurrently established a framework to identify G-SIBs on an ongoing basis through an indicator based scoring methodology.

In July 2013, the BCBS published a revised G-SIB assessment methodology. The list of G-SIBs and applicable capital buffers is updated by the FSB on an annual basis. Barclays' status as a G-SIB was confirmed by the FSB in November 2021. The FSB is expected to publish an updated G-SIBs list in November 2023.

The BCBS methodology has been implemented in the European Union via article 131 of the Capital Requirements Directive, in which G-SIBs are referred to as Global Systemically Important Institutions (G-SIIs). Depending on the overall score of a G-SII a capital buffer is applied to the institution's capital requirements. Those institutions identified as G-SIIs are required to disclose, on an annual basis, the values of the indicators used for determining the G-SII status and capital requirements, in accordance with article 441 of the accompanying Capital Requirements Regulation.

Identification

G-SIIs are identified as prescribed by the BCBS methodology using a score based system dependent upon thirteen indicators. The indicators are based on the following criteria:

- Size – bank size, as measured per its leverage exposures
- Interconnectedness – transactions with and securities held in other financial institutions
- Substitutability – the extent to which the banks services could be substituted by other institutions, such as payment infrastructure, underwriting transactions, custodian activities and trading volumes.
- Complexity – the degree of complex transactions a bank is party to, including OTC derivatives, trading and AFS securities, and those assets classified as level 3 assets under IFRS (i.e. least observable market prices)
- Cross-jurisdictional activity – bank's activities outside its home jurisdiction; this indicator includes the impact of foreign derivatives.

Capital buffer requirements

G-SIIs are required to hold between 1% and 3.5% of additional Common Equity Tier 1 (CET1) loss absorbing capital buffer. There is a two-year time lag between the data point used for G-SII score calculation and the capital applicability.

For 2023, based on 31 December 2020 indicators, Barclays falls within the 1.5% capital buffer category. The G-SII indicators as at 31 December 2022 that are included in this document will determine the capital buffer applicable to Barclays for 2025.

Basis of preparation

The disclosure of G-SII indicators is required by the EBA. In May 2016, the EBA issued Commission Delegated Regulation (EU) 2016/1608 that aligns EBA requirements with BCBS methodology and Commission Delegated Regulation (EU) 2016/818 that aligns disclosure requirements with the latest BCBS templates and instructions. The BCBS update reporting instructions on an annual basis, with instructions for the year ended 31 December 2022 issued in January 2023.

The data disclosed in this document may not be directly comparable with other disclosures. Differences may also arise with other external disclosures as the G-SII indicators are based on the regulatory scope of consolidation for most data points. For further information on the difference between financial reporting and the regulatory scope of consolidation please refer to page 18 of the 2022 Barclays PLC Pillar 3 Report.
